

# VARIABLES FOR NUMBERS

Assignment # 3  
JAVASCRIPT

MODULE A - Mobile & Cloud Computing

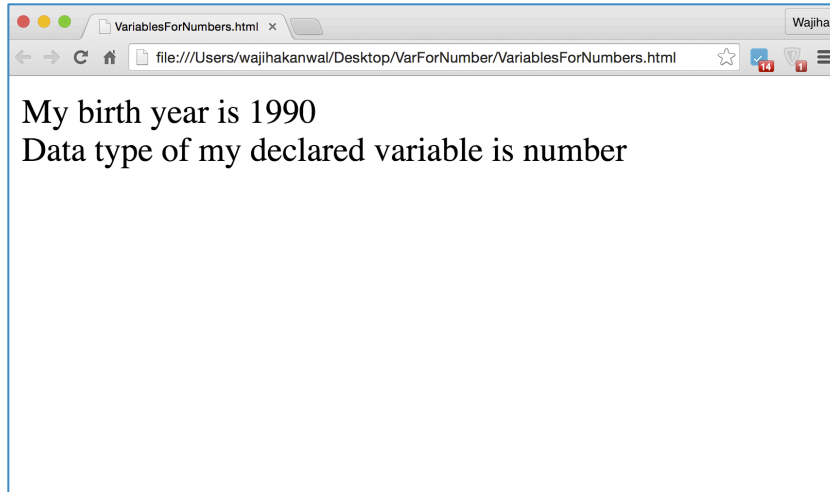

1. Declare a variable called ***age*** & assign to it your age. Show your age in an alert box.

2. Declare & initialize a variable to keep track of how many times a visitor has visited a web page. Show his/her number of visits on your web page. For example: "You have visited this site N times".

3. Declare a variable called ***birthYear*** & assign to it your birth year. Show the following message in your browser:

4. A visitor visits an online clothing store [www.xyzClothing.com](http://www.xyzClothing.com) . Write a script to store in variables the following information:

- a. Visitor's name
- b. Product title
- c. Quantity i.e. how many products a visitor wants to order

Show the following message in your browser: **“John Doe ordered 5 T-shirt(s) on XYZ Clothing store”**.

-- END --
